Topic: Curbing the Global Warming Crisis in Response to the Recent Australian Wildfires

Alarmed by the series of wildfires that Australia has been experiencing that are endangering the wildlife as well as people;

Reminds member nations that July 2019 was the hottest month on record for the planet;

Deeply concerned that global warming unstopped will continue to lead to adverse effects on the environment such as wildfires, heat waves, floods, droughts, and tropical storms;

Recalls the International Renewable Energy Agency's (IRENA) latest report, which states that unsubsidized energy has become the cheapest source of generating energy;

Notes that hydropower and solar power are two of the cheapest sources of energy;

Realizes that all member nations must work together to slow the effects of global warming;

- 1.) Endorses a proactive plan that would progressively work to eliminate all carbon dioxide emissions globally;
- 2.) Supports the replacement of non-renewable energy sources with affordable, renewable energy sources, such as hydropower, solar power, and wind power;
- 3.) Calls upon the top 25 wealthiest countries in the UN based on GDP to provide monetary aid to countries that are struggling to institute a renewable energy plan on their own;
- 4.) Supports placing sanctions on countries who exceed an agreed upon quota for how much carbon dioxide emissions can be released;
- 5.) Urges a collective security initiative that would provide financial aid to any member nation that was experiencing a natural disaster due to climate change.
- 6.) Requests that more money be diverted to increase the efforts of wildlife protection programs in areas that are experiencing a substantial increase in the number of endangered species and resources due to climate change.
